Recruitment Application Tracking System

Introduction

Online recruitment system is a platform that holds all the process of the employment for the organization. It is an automated system with the various component to facilitate the processes involved in finding, attracting advertisements for the recruitment, interviewing and hiring a new employee.

The main objective of this system is to make easy the whole process starting from advertisement till the recruitment of the candidate for both organization and candidate. It also helps consultants to refers the list of candidates to the companies as per their requirements.

There are several modules that work once when the user is logged in with his authenticated credentials that will be generated once he/she gets registered. The users can choose any of the components displayed and can avail the services as per their preference..

System is based on the roles and there permissions it can be said as “One solution for multiple roles accessible as per there permission”.

Recruitment Application Tracking System

Recruitment Application Tracking System Features

- **There are few modules that covers the entire system and its working.**
 - **Role and Permission Management:-**
 - In this module, Admin has all the rights to create roles, assign it to the user and based on that admin can assign permissions to the user.
 - **Master Management:-**
 - In this module ,there are two type of masters
 - Skill management,
 - Location Management.
 - Admin has all to rights to create all the skill set and locations.
 - **Interview Management:-**
 - In this module a interview can be planed, schedule and its feedback can be given by various authorized persons based on their roles and reviewed by placement committee.
 - **Candidate Management:**
 - In this module, Candidate can upload its CV based on the requirement to satisfies criteria. and can track its status(In-progress,Hold,open,Selected) of recruitment process .
 - **Consultant Management:**
 - In the this module,Consultant(Agency) can refers the candidate for the requirements raised by the organization and also track the status of the referred candidate CV.

Recruitment Application Tracking System

Need and Benefits of the System

- Attract and empower an ever increasing number of applicants to apply in the organization.
- Reducing effort of HR
- Comfortably, tracking referrer of each candidate
- We can track each interview feedback as well
- Each responsible persons has get notification on each stage of process
- We can track duplicates candidate effortlessly
- Build positive impression of the recruitment process.
- Create a talent pool of candidates to enable the selection of best candidates for the organization.
- To attract and engage people it needs to achieve its overall organizational objectives
- Increase the pool of job candidates at minimum cost.
- Recruit right people who will fit in to organizations culture and contribute to the organizations goals.
- Determine Current and future requirements of the organization in conjunction with its personnel planning and job analysis activities.
- Meet the organizations lawful and social commitments with respect to the synthesis of its workforce.

Recruitment Application Tracking System

Benefits of the System

1. Reduce Time to Hire:-

- One of the most important function of HR and the key to the success of Candidate Manager recruitment solutions is the ability to reduce the time it takes to hire the right people.

2. Reduce administrative duties:-

- With recruitment software from Candidate Manager, candidates are instantly filtered, ranked and stored, and tracking their progress is simple.

3. Easy candidate progress tracking:-

- Access, track and manage candidates' progress directly from the software to make your hiring more streamlined.

4. Automated interview scheduling:-

- Send automated emails with interview appointment of candidate.

5. Customizable recruiting email templates:-

- Save time and use existing or create your own email recruiting templates.

6. Easy team collaboration and communication:-

- Easily share info about sourced candidates with team members who need them

7. Define the user roles:-

- Assign different roles to each of user to control who has an access to what info.

Recruitment Application Tracking System

Feasibility study

● Feasibility Study:-

- An important outcome of the preliminary investigation phase is the feasibility study which aims to determine whether it would be technically, financially and operationally feasible to develop the product.
- There are generally three aspects in the feasibility study portion of the preliminary investigation
 1. Technical Feasibility of project
 2. Economic Feasibility of project
 3. Operational Feasibility of project
- Keeping these aspects in mind, I have carefully evaluated my project to be technically, economically and operationally best applicable and well organized. This study leads me to the following results.

1. Technical Feasibility:

- The technical feasibility determines whether the work for the project can be done with the present equipment, current procedures, existing software technology and available personnel.
- The project was required to be developed using PHP and MySQL. The system can be easily expanded, in future by adding new modules.
- Results: All the technologies to be used are available with the firm and made available for the development of the project.

2. Economic Feasibility:

- Economic analysis is the most frequently used method for evaluating the effectiveness of a new system. More commonly known as cost/benefit analysis, the procedure is to determine the benefits and savings that are expected from a candidate system and compare them with costs.
- If benefits outweigh costs, then the decision is made to design and implement the system. This economic analysis is one of at most important in development of software for any organization. Since, all software support and hardware platform required in this project are already available at with us, no extra cost have to be involved for developing and implementing this software product. Thus, this software is financially feasible.

Recruitment Application Tracking System

- Results: This web application is financially feasible, though our financial condition is not much sound to purchase any other licensed software to work on, the project was made successful with open source technologies.

3. Operational Feasibility:

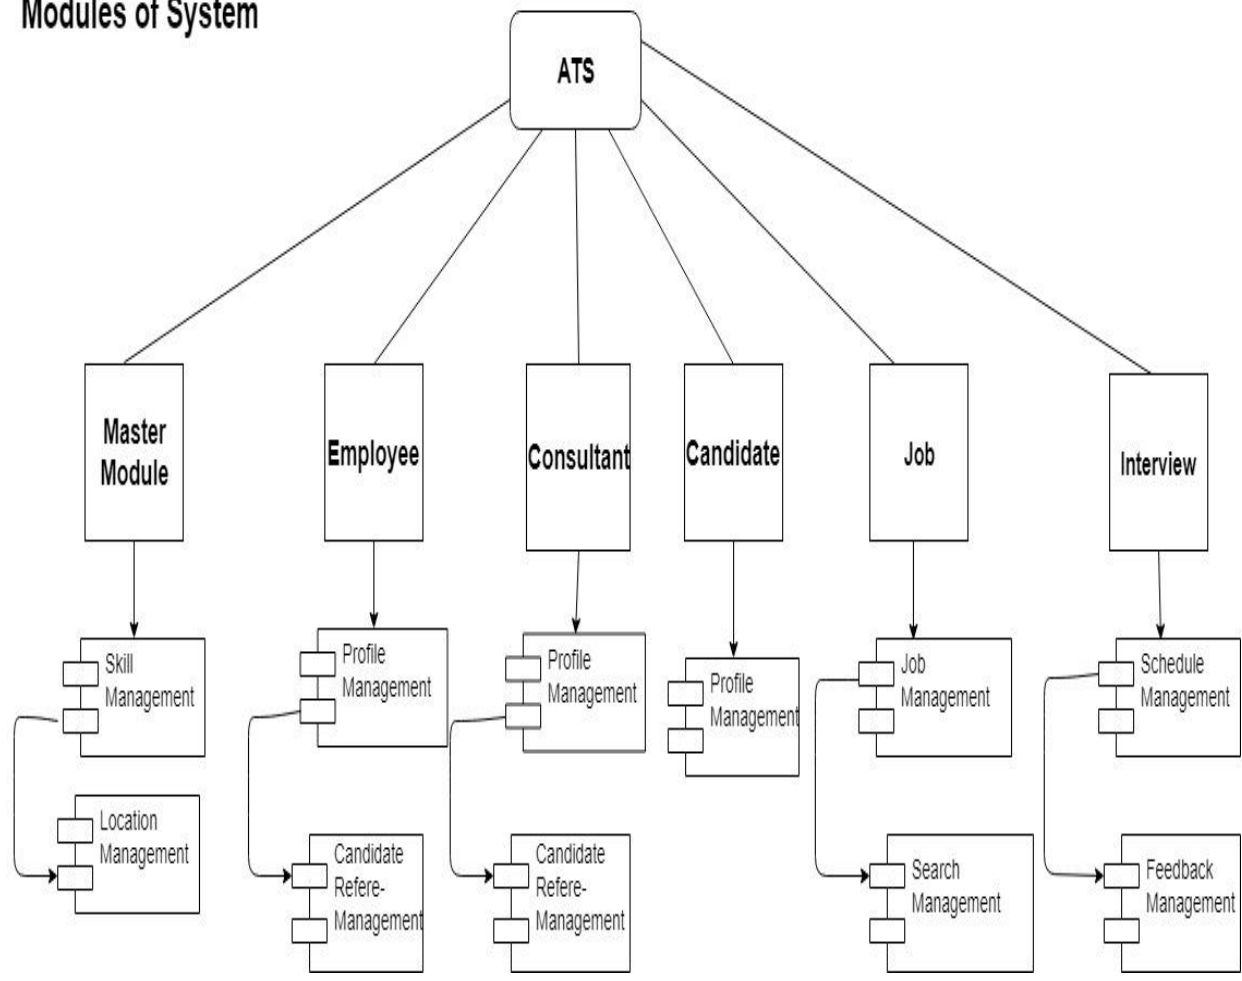

- Operational feasibility is a measure of how well a proposed system solves the problems, and takes advantage of the opportunities identified during scope definition and how it satisfies the requirements identified in the requirements analysis phase of system development.
- End users of the system are Additional Administrators by who might not have sound technical knowledge to use system. Thus, extra care is taken by me to provide very good and easy to understand user interfaces, so that least operational problems have to be encountered. Hence, this makes this web application/system product operationally feasible.

Recruitment Application Tracking System

The screenshot displays the 'Job Opening Details' page in a web application. The browser address bar shows the URL '127.0.0.1:8000/backend/requirement%2F1'. The application header includes the title 'Applicaton Tracking' (note the typo), a user profile for 'jinal shah' with 'Online' status, and notification icons. The left sidebar lists navigation options: Dashboard, Master management, Consultant management, Employee management, Candidate management, Jobs management, and Interview management. The main content area features a disclaimer: 'By clicking "Post Your Answer", you agree to our terms of service, privacy policy and cookie policy'. Below this is a tabbed interface with 'Requirement', 'Location', 'Interview', and 'Attachment' tabs. The 'Interview' tab is active, showing a table with the following data:

Interview Name	DateTime	Candicate Name
General Interview	Mar 30, 2019	chirag rami
general interview	Apr 06, 2019	Komal Rami

The interface also includes a 'Back' button and an 'Activate Windows' watermark at the bottom right.

Admin can view of Job(Requirement). This page contains all necessary information about the Job(Requirement) like:- Location, Interview List of the candidate of particular Job(Requirement).

Recruitment Application Tracking System

● View Job(Requirement) Window:

The screenshot displays the 'Add Employee Details' form within the 'Employee Management' section of the 'Applicaton Tracking' system. The interface includes a top navigation bar with the system name, a user profile (jinal shah), and notification icons. A left sidebar lists navigation options: Dashboard, Master management, Consultant management, Employee management, Candidate management, Jobs management, and Interview management. The main content area is titled 'Employee Management' and contains a breadcrumb trail: Home > Employee List > Add Employee. The form itself is titled 'Add Employee Details' and is divided into several sections: 'Add Employee Details' (with fields for First Name, Last Name, Designation, Department, Employee code, Review, Status, Is Interviewer, Address, and Address2), 'SignUp Details' (with fields for EMAIL and Password), 'Role' (with a 'Select Role' dropdown), and 'Profile' (with a 'Choose File' button and 'No file chosen' text). At the bottom of the form are 'Submit' and 'Cancel' buttons.

Recruitment Application Tracking System

Future Enhancement:-

- Here is a complete list of Future Enhancements that could be possible:
- Develop a custom Mobile Application for both iOS and Android.
- Develop the Offer Module in the system
- Integrated the our HRMS system.
- Integrated With the calender.
- Refers the multiple CV in one time.
- Use the predefined feedback template.
